

EHSQ Digitization, Where to start?

Digitizing your Quality and EHS processes is now essential if you would like to gain in reactivity, efficiency, free yourself from office automation files, email exchanges, save time in your work. To achieve this, it is essential to do it step by step / Process by Process in the digitization. Here is an example of this.

1

Before getting started

2

Make an inventory of the situation of your existing system

- Start by **identifying existing solutions** (ERP, HR software, SAP...).
- Then check the **interfacing of the future EHSQ solution** with these solutions.

Make a list of EHSQ issues

- **Ask your employees** in the field: they will also be the main users!
- **Make a list your personal issues**
 - Identify your priorities

1st step Electronic Document Management

Your issues: too many documents, restricted access, versioning...

- Monitoring of the life cycle of your documents
- Consultation history available on the tool
- Information easily accessible to all

2nd step

Digitized Global Action Plan

3rd step

Audits on tablets

Your issues : information transcriptions, loss of information...

Your issues: poor action monitoring, difficult internal communication sometimes...

- Better information sharing on actions
- Empowerment of your employees/pilots
- Automatic alerts when an action is completed

- Time saving
- Data entry in the field
- Automatic generation of the report (transmitted by email at the end of the audit)

4th step

Digital management of NC

Your issues : non-conformities ruled out in the field sometimes...

- Alert will be sent in real time to the services concerned
- Notification of the incident
- Monitoring over time of NC history/ruling out through statistical analysis

4

Go further! Digitize easily with the BlueKanGo platform seen as a reference in the EHSQ fields.
